
plan44.ch P44-GW-MW

Makes any **Wiser-by-Feller** ready for the **Matter Smarthome** in just a few clicks.

Installation: Connect the P44-GW-MW to the Wi-Fi router via an Ethernet cable, press the button, the Wiser Wi-Fi module lights up purple, confirm, and you're done!

Residents: Two clicks on the device bring up the Matter QR code, which is scanned using a Matter app (Apple, Alexa, Ikea, SmartThings, Google, Home Assistant, etc.), and all Wiser devices appear in the Matter smart home of your choice.

Tenant change: A few clicks on the device, and the Matter connection is removed – the basic installation remains unaffected, and everything is ready for the next tenant.

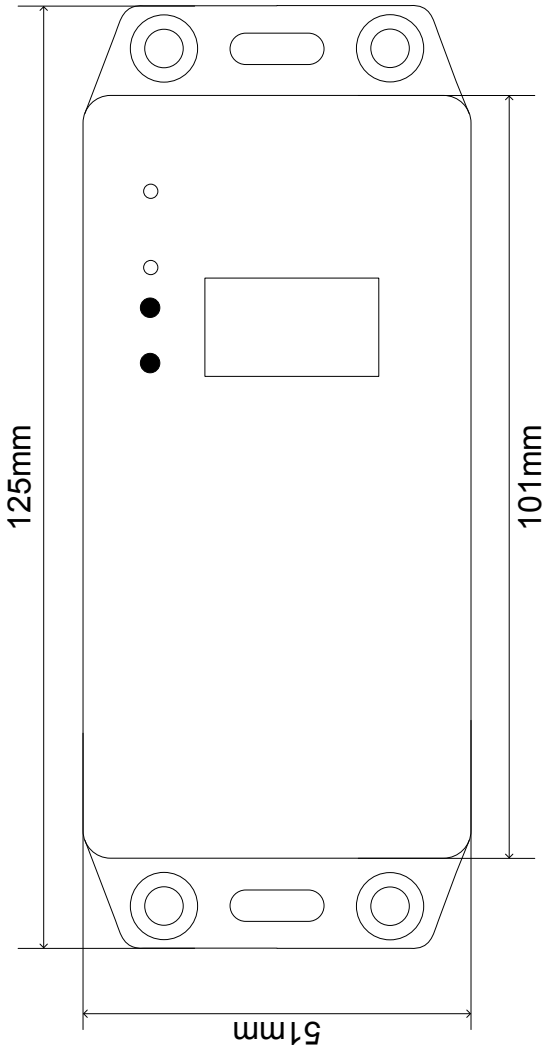
Matter
The manufacturer-independent global smart home standard that, for the first time, allows **simultaneous operation** with different control systems and apps.

Wiser-by-Feller
A well-designed and durable system that enhances comfort and safety in your own home – without any unnecessary, complicated or expensive frills. It can be installed in no time at all by any electrician, making it cost-effective.

hue
Supplementing the lighting with atmospheric coloured, warm/cool white and single-colour LED lights in various shapes.

How it works

- The device is connected to the Wi-Fi router or the LAN via an Ethernet cable.
- The connection to the Wiser-by-Feller Wi-Fi module is initiated via the device display or buttons. The Wi-Fi module flashes purple.
- The connection is confirmed by pressing a button on the Wi-Fi module.
- **Without any further configuration**, all Wiser-by-Feller dimmers and switches are now accessible via Matter.
- Users can now scan the Matter QR code directly on the device display, thereby connecting **one or more smart home systems of their choice** to the P44-GW-MW with just a few clicks. The names from the Wiser eSetup app are adopted, and these names can be customised.
- For **specific configuration requirements**, there is a web interface offering numerous additional functions to set up timers, integrate with web services, connect to Hue lights and much more. The web interface can be accessed directly via a QR code displayed on the device, but **can also remain restricted to the installer** using a specific password – users have every opportunity to conveniently implement their own automation preferences via Matter.
- This provides a **clear separation** between the basic installation (Wiser-by-Feller + settings in P44-GW-MW) and the users' preferences and settings (implemented via Matter, which can be easily reset when tenants change). This simplifies support cases enormously.



Features

- A powerful embedded platform ensures reliable operation even with a very large number of endpoints in Matter and Wiser-by-Feller.
- Low power consumption, <2.5W
- Fully self-sufficient operation; only a local connection to Wiser-by-Feller is required; internet access is optional.
- Optional remote maintenance capability (can be enabled or disabled by users via the device menu for support cases)
- Optional integration with Philips Hue lights.
- Integrated Ethernet port (100baseTX)
- Power supply via the supplied 5V mains adaptor
- Can be **expanded with a Digital Strom bridge function if required** to make existing DS devices Matter-compatible as well

Connections

- RJ45 socket for 100baseTX Ethernet connection
- USB-C port for 5V power supply Contents of the package

Contents of the package

- P44-GW-MW unit in flange housing
- Ethernet patch cable
- Euro-plug mains adaptor 230V AC, 5V/1A

Where to buy

- exklusively at Otto Fischer AG ottofischer.ch, E-No 996 810 020
- at plan44.ch/shop
